

Henk Bruin did his PhD in Delft (the Netherlands) under direction of Sebastian van Strien, on a topic in interval dynamics. Since then he has had several (postdoc) positions in Europe and at Caltech.

Since 2012 he has been professor in dynamical systems and ergodic theory at the University of Vienna.

His research covers several areas of dynamical systems and (smooth) ergodic theory, including topological and symbolic dynamics, on which he wrote a graduate text-book in 2022.
